

2.5 m²
bee flowering
fields for each
booking

Save the bee – save our Earth!

“If the bee disappeared off the face of the Earth, man would only have four years left to live. No more bees, no more pollination, no more plants, no more animals, no more man.” (A. Einstein)

Interhome Group is a leading example in sustainability. We are continuously committed to a sustainable holiday home tourism for the future.

We take our responsibility seriously and are committed to the conservation of bee populations. Interhome Group is committed to contributing 1 € for each booking to the bee conservation programme of our partner Beesark. For each booking, 2.5 m² of bee flowering fields are planted in Austria.

Protecting bees preserves our future

- The flower fields with regionally native plants contain only seeds of wild flowers harvested in the region
- These plants are optimally adjusted to the climate, soil and other factors in the region and are competitive in their natural conditions
- Assorted mixtures of regional origin are offered for various locations
- Long-lasting bloom for decades and an even faster bloom in combination with annual flowering periods, richly blooming eye catchers while preserving the regional gene pool
- High ecological value: the assortments often contain between 20 and 40 different species which serve as forage crops for special and rare breeds

Per m² 87.37 g of CO₂ are captured in a field and 72.81 g/m² of oxygen are released.
